

APPENDIX 1. NOTIFICATION TEMPLATE

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

Este informe contiene información muy importante sobre su agua potable.

Por favor hable con alguien que lo pueda traducir.

1,2,3-Trichloropropane Monitoring Requirements Not Met for Round Valley Elementary School During First and Second Quarters 2018

Our water system recently failed to monitor as required for a drinking water standard during the first and second quarters 2018 and, therefore was in violation of the regulations. Although this is not an emergency, as our customers, you have a right to know what happened, what you should do, and what we did to correct the situation.

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. Starting in 2018, we were required to test the water for 1,2,3-trichloropropane (1,2,3-TCP). During the first and second quarters 2018, we failed to do the required monitoring for 1,2,3-TCP and therefore, cannot be sure of the quality of our drinking water during that time. California has adopted a maximum contaminant level (MCL) for 1,2,3-TCP in drinking water at 5 parts per trillion.

1,2,3-TCP in drinking water can come from discharge from industrial and agricultural chemical factories; leaching from hazardous waste sites; used as cleaning and maintenance solvent, paint and varnish remover, and cleaning and degreasing agent; and a byproduct during the production of other compounds and pesticides.

What should I do?

- There is nothing you need to do at this time. This notification is to make you aware that we did not complete the required monitoring.
- Some people who drink water containing 1,2,3-TCP in excess of the MCL over many years may have an increased risk of getting cancer. If you have health issues concerning the consumption of this water, you may wish to consult your doctor.

What is being done?

The initial sample for 1,2,3-TCP was completed on 10-31-2018. Three additional samples will be taken quarterly over the next year. This system is continually monitored for this and many other contaminants on periodic schedules. We will continue to strive for complete and comprehensive monitoring.

10-31-2018 thru 9-30-2019

We anticipate resolving the problem within [estimated time frame] _____.
